The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques

(II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating continuation of sites expressing (II). (I) and (II) are useful for treating continuation of the polypeptide and polymuclectide sequences have applications in the product of the polypeptide and polymuclectide sequences have applications in the product of genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on NNA and continuation acid sequences. ABG00010-ABG30377 represent novel human are diagnostic amino acid sequences of the invention.

CC diagnostic amino acid sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

This invention describes a novel rabbit carboxylesterase polypeptide (I) capable of metabolizing a chemotherapeutic prodrug and its inactive metabolites into an active drug. The invention also describes a composition comprising (I) and a disease-specific responsive promoter. This composition is useful for sensitizing tumor cells to a chemotherapeutic prodrug (preferably CRT-11 or APC) by transfecting into tumor cells, and contacting the sensitized cells with a chemotherapeutic prodrug to inhibit growth of the tumor cells. The composition can also be administered to bone marrow cells to remove tumor cells. The products of the invention are useful for identifying drugs that are inactivated by a carboxylesterase enzyme, and are also useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Oryctolagus cuniculus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Carboxylesterase; rabbit; liver; tumour cell; chemotherapy; prodrug; disease-specific responsive promoter; CRT-11; APC; resection; recurrence; inhibition; bone marrow cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAY33146;

Perfect score:
       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Score

-!- COFACTOR: Binds 2 Fe/S clusters: 1 4Fe-4S cluster a 4Fe-20-2S cluster (By similarity).
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-!- SIMILARITY: Belongs to the HCP family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          METAL

Blom N., Sygusch J.,

"Product binding and role of the C-terminal region in c

percetose 1,6-bisphosphate aldolase.";

Nat. Struct. Biol. 4:36-39(1997).

-I. CAPALYTIC ACTIVITY: D-fructose 1,6-bisphosphate = g

phosphate + D-glyceraldehyde 3-phosphate.

-I. PATHWAY: Glycolysis; sixth step.

-I. PATHWAY: Glycolysis; sixth step.

-I. SUBUNIT: TETRAMER OF NEARLY IDENTICAL CHAINS, ALPHA

DIFFER AT ONLY 1 POSITION. N-360 IN THE ALPHA CHAIN.

TO D-360 IN THE BETA CHAIN.

-I. MISCELLANEOUS: In vertebrates, three forms of this

glycolytic enzyme are found, aldolase A in muscle,

liver and aldolase C in brain.

-I. SIMILARITY: Belongs to class I fructose-bisphosphat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    MEDLINE=74163196; PubMed=4857186;

Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).

RT proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).

C. -!- CATALYTIC ACTIVITY: D-fructose 1,6-Disphosphate = glycerone phosphate + D-glyceraldehyde 3-phosphate.

C. -!- SUBUNIT! Homotetramer (By similarity).

C. -!- WISCELLANBOUS: In vertebrates, three forms of this ubiquitous glycolytic enzyme are found, aldolase A in muscle, aldolase B in C. SIMILARITY: Belongs to class I fructose-bisphosphate aldolase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                This SWISS-PROT entry is copyright. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
